

Squalane (Synthetic)

Product Information

Cat

CAI-007-Syn

Product Name

Squalane (Synthetic)

Appearance

Liquid

Description

Synthetic squalane is produced through chemical synthesis methods, typically without relying on plant or animal sources. This synthetic approach ensures the purity and consistency of the raw materials while avoiding pressure on the ecosystem. Synthetic squalane possesses similar properties and structure to natural squalane, including excellent permeability and moisturizing effects, making it equally popular in cosmetics and skincare products. Additionally, the controllability of the synthesis process provides advantages in efficiency, sustainability, and low variability.

Benefits

Moisturizing, repairing, anti-aging
